Health benefits of UniK2®

Within the group of vitamin K2, MK-7 is far more important for bone health and cardiovascular health than the synthetically derived MK-4. Vitamin K2 promotes the activation of vitamin K-dependent proteins, like osteocalcin in the bones and matrix Gla protein (MGP) in the vascular system, in a process known as carboxylation. Thereby vitamin K2 promotes bone health and heart health at the same time.

Bone health
Prevention of osteoporosis by activating the specific protein (osteocalcin), which results in an optimal binding of calcium to the bone structure and, by improving the collagen status in bone. MK-7 is effective on improving bone quality and bone strength, which is proven by multiple clinical studies.

A natural source of Vitamin K2

Product summary
- Natural vitamin K2 as Menaquinone-7 (MK-7) derived from Natto
- Made in Japan (GMP)
- Approved European Novel Food status
- High purity and stability
  - High MK-7 concentration
- Most bioavailable and most bioactive form of vitamin K
- Effects on bone & cardiovascular health at nutritional doses

Health benefits of UniK2®
- Strongly supported by clinical data
- Bioavailability 6-8 times better than vitamin K1
- Lower dosage for effect and longer bioavailability compared to vitamin K1 (synthetic variant)
- Safe and effective
- Approved EU Health Claims on Bone Health
- Self affirmed GRAS

UniK2® products
- Oil: \( \geq 0.15\% \)
- Powder: \( \geq 0.20\% \)
